10th edition of Anton, Bivens, Davis 11th edition of Anton 9th edition Anton, Bivens, Davis 10th edition Anton, Bivens, Davis 10th edition of Howard Anton, Irl C... Showing 1-30 Start your calculus review: New Horizon Anam rated it was amazing on May 09, 2011 Daniyal Ahmed rated it was amazing April 15, 2014 Kalin Kosmin rated it was amazing March 19, 2013 Ahmed Al hmide rated it really liked June 19, 2014 Mancia rated it did not like September 22, 2018 Allen appreciated it very much on October 19 04, 2011 Mahy Mamdouh rated it was amazing 08 February 2014 Aditya rated it was amazing October 14, 2011 ANUMOL MARIYAM rated it did not like December 14, 2011 ANUMOL MARIYAM rated it not liked 10, 2015 Aqsa Choudary rated it was amazing October 10, 2016 Bilal Ahmed rated it amazing 08 February 2018 Mah rated it was amazing June 26 , 2010 Mirza Bilal appreciated it very much liked January 23, 2018 Usman appreciated it really liked 04 April 2013 Asif Ali appreciated it very much on June 02 liked , 2015 mathlover22 rated it was amazing October 23, 2016 Raza Ghalib rated it was amazing December 25, 2013 Praveen rated he liked it July 01, 2016 Marcio rated it was amazing Sep 19, 2015 AVIJIT DAS rated it was amazing June 01, 2016 Let me start with the fact that I took the calculus of the series as a self-learning course and do not have the advantage of a professor who taught the material, THEN used the book for assignment and reference purposes only. Most of the reviews so far seem to be written by professors who can't remember a time when they didn't know the calculus, or students who know the material but are looking for retraining. It can be a beautiful book if you fit into this category and know the material, but if you're trying to learn it for the first time, you'll need to invest in a whole arsenal of other books to explain what's going on in this. As a necessary text for calculating the course, I ended up shelling out a painful 160 large (\$) text and decision guides. The examples are too simplistic and do not apply well to the main part (even moderated) assigned problems where the student stays on his luck in opening the process of doing calculus. The difference in the difficulty level between odd and even problems is often staggering. Since even problems don't have answers, they usually end up as the bulk of the job you're asked to pass in. But there is little comparison or explanation for many even moderate exercises. The guide to solutions is, again, too simplistic, suggesting that the student needs to see something done only once, rather than repeating it over several preparations. Important small details often remain quite obscure when they need to be drilled in, but for me, as an engineer, mathematics is only a means to an end. I know it's important, but I'm not going to get into it. If you have a wonderful professor, you'll be fine. Order, you have an ogre that just shows up to drink coffee, or you try to instruct yourself, you're better off with something like Calculus with analytical geometry by Robert Ellis and Danny Gulick. It's hard to know the calculus on your own, but it's a tolerable task with the Texts of Ellis/Gulick. I have a good place on my bookshelf for them. I couldn't get Anton's set back to university because they decided to change the books. I was initially very upset but was soon very pleased to see that he made a wonderful (albeit expensive) kindling as I burned a few piles of brushes through my property. I just couldn't bring myself to use it in the outhouse... The pine cone used in the wrong direction will be less annoying. Add a review and share your thoughts with other readers. Be the first.
